

# G722.2 Encoder/Decoder

## Version 02.02.01

### Release Notes

**April 2013**

#### Build ID: 02.02.01.00

The release note is divided into the following sections:

- [New In This Release](#)
- [Validation Information](#)
- [Fixed In This Release](#)
- [Known Issues](#)

#### New In This Release

- This release supports C55x CPU silicon revision 3.3.
- This release of G722.2 Encoder/Decoder on C55x platform is validated on C5515 with Code Composer Studio version 5.2.1.00018 and code generation tools version 4.4.0.

#### Validation Information

Release Configuration	Description	Validation Platform
C55X_G722_2	G722.2 Codec on C55X	C5515 EVM <a href="#">[Datasheet]</a> <a href="#">[User Guide]</a>

This release is validated on the following:

- C5515 EVM
  - SYS/BIOS™ version 6.33.04.39
  - Framework Components version 3.22.03.09
  - XDAIS version 7.22.00.03
  - XDCTools version 3.23.02.47
  - Code Generation Tool version 4.4.0
  - Code Composer Studio version 5.2.1.00018

## Fixed In This Release

Defect ID	Description	Applicable Release Configuration
SDOCM00095158	WBAMR C55x – Un initialized data section is being incorrectly placed into table memory	C55X_G722_2
-	VAD/DTX control is not happening as explained in the docs	C55X_G722_2

## Known Issues
