1 In This Release

This is the 02.11.03.XX release of EDMA3 Driver and contains libraries, sample initialization libraries, standalone sample applications and support documents.

This release contains sample OS adaptation layer for BIOS 6, which could be used by BIOS 6 based applications.

❖ New features in the components of release

- 1) TIDSP00012765 – Addition of M3 support for Centaurus in EDMA3 LLD
- 2) TIDSP00012766 – Addition of A8 support for Netra in EDMA3 LLD

2 Out-of-Box Contents

edma3_ild_02_11_03_03.tar.gz contains following:

1.
 - Source code for EDMA3 Resource Manager, Driver and other necessary abstractions.
 - Project files (DSP/BIOS™), CCS4 build files, XDC package.bld files (for supporting getlibs function) and all Makerules and Makefiles, to build EDMA3 package in host environment. Please note from this point of time, libraries can be built using Makefiles only. Hence libraries need to be built through command prompt using gmake command (Please refer the user guide available with this release for detailed build instructions).
 - The above mentioned items are located inside the <installation dir>\edma3_ild_02_11_03_XX\ directory.
 - Please note that the CCS setup files and GEL files are NOT provided with this release and this would be available with latest CCSv4 releases or from EVM manufacturer.
2. Release Notes (this document) providing an overview of this release.
3. User Guide and data sheets.
4. EDMA3 Driver API (generated) documentation in CHM format.

3 Known Issues

1.	Instrumentation (all components)
Release Note	
Instrumentation code is not yet implemented as the XDC/CCSV4 version at the point of development did not support RTA and instrumentation APIs.	
Workaround	
None	

2.	EDMA3 hardware doesn't work properly in FIFO mode with all the controllers.
Release Note	
Very few peripherals support EDMA3 FIFO mode. EMIF controller doesn't support the same. So EDMA3 CANNOT be used in FIFO mode for doing a mem-2-mem data transfers, EDMA3 being configured in the FIFO mode. Applications trying to use EDMA3 in FIFO mode should first check their respective peripheral-controller document for this mode support.	
Workaround	
None	

3.	PingPong Example Fails for certain EDMA instances for some DSP cores in Release mode only.
Release Note	
PingPong example fails for certain EDMA Instances for some DSP cores in Release Mode only. It passes in the Debug mode.	
Workaround	
None	

4.	ARM 9 support for OMAPL138 is not available on Make based build of EDMA3LLD
Workaround	
None	

5.	The following IR is raised on this release.
IR# SDSCM00039169 EDMA3 Example fails for following Big Endian Simulators: tci6608-sim/tci6616-sim	
Workaround	
None	

4 Limitations

None.
