

H.264 Baseline/Main/High Profile Encoder on DM365/DM368

#### **Overall Feature:**

- eXpressDSP Digital Media (XDM1.0 IVIDENC1) interface compliant
- Validated on the DM36x EVM
- H.264 Baseline/Main/High Profile up to level 5.0 compliant
- Supports resolutions up to 4096x4096 in Platinum mode and 2048x2048 in Version 1.1 backward compatible mode.
- YUV420 semi-planer input format for the frames supported
- Supports input resolution being multiples of 2
- Progressive and Interlaced encoding supported
- CAVLC and CABAC encoding supported
- Unrestricted Motion Vectors (UMV) supported
- Half Pel and Quarter Pel Interpolation for motion estimation supported
- Sequence scaling Matrix is supported
- Transform 8x8 and Transform 4x4 is supported
- Rate Control (CBR and VBR) supported
- Insertion of Buffering Period and Picture Timing Supplemental Enhancement Information (SEI) and Video Usability Information (VUI) supported
- Adaptive Intra Refresh (AIR)
- All 16x16, 8x8 and 4x4 Intra-Prediction Modes supported in I-Frame and INTRA16x16 DC is supported in P-frames
- Only single motion vector per macroblock
- Support for multiple slice with size specified in terms of Macroblock or Macroblock row

- Supports SVC-T up to four layers.
- Supports chain free P frames encoding.
- Supports Fixed slice size encoding feature.
- Supports ARF (Adaptive Reference field) and MRCRF (Most Recent Coded Reference field) encoding.
- Supports Constrained VBR Rate control (CVBR).
- Supports Fixed frame size Rate control.
- Supports configurable Scaling Matrix and VUI parameters encoding.
- Supports Gradual Decoder Refresh(GDR)
- Mega Pixels Support: Mega Pixel supports input video upto 4096x4096 pixels.
- Supports Adaptive Long-Term frame insertion
- Supports 1.1 backward compatible improved quality mode which has following features
  - 4 motion vectors per Macroblock
  - All 16x16, 8x8 and 4x4 Intra-Prediction Modes supported in P-Frame

### **Smart features supported**

- Region of Interest (ROI) supported
- Privacy Masking feature supported
- Simple Two Pass supported

## Support Low latency feature

- Can be configured to provide output at NAL granularity or after entire frame is encoded
- Supports encoded output in NAL stream or Bytes stream format

# **Not-supported features**

- Error Resilience features such as ASO/FMO and redundant slices
- B frames and weighted prediction

Please be aware that an important notice concerning availability, standard warranty, and use in critical applications of Texas Instruments semiconductor products and disclaimers thereto appears at the end of this data sheet.

# description

H.264 (from ITU-T, also called as H.264/AVC) is a popular video coding algorithm enabling high quality multimedia services on a limited bandwidth network. H.264 standard defines several profiles and levels which specify restrictions on the bit stream and hence limits the capabilities needed to decode the bit streams. This project is developed using Code Composer Studio version 3.3.81.6 and using the code generation tools version 4.5.2.

## Performance measurement procedure

- Measured with program memory and I/O buffers in external memory, I/D cache enabled, ARM
   @297 MHz, DDR
   @270 MHz, Monta Vista Linux 5.0 for ID H264 ENC 01 and H264 ENC 03.
- Measured with program memory and I/O buffers in external memory, I/D cache enabled, ARM @ 432 MHz, DDR @ 340 MHz, Monta Vista Linux 5.0 for ID H264\_ENV\_02, H264\_ENV\_04, H264\_ENV\_05, H264\_ENV\_06, H264\_ENV\_07, H264\_ENV\_08 and H264\_ENV\_09.
- DM365 EVM with MV Linux is used to measure the performance numbers in this Data sheet.
- The process time is measured across algActivate/process/algDeactivate function call using gettimeofday() utility of linux.
- NFS File system is used as an environment in performance measurement.
- The performance numbers are measured at certain bit-rates. For larger bit-rates like more than 12mbps for 720p and more than 20mbps for 1080p, some degradation in performance numbers can be observed.

## Summary of performance

This section describes performance of Standalone H.264 Encoder tested on DM365 EVM.

Table 1. Configuration Table

	CONFIGURATION	ID
Version 2.0 Platinum mode	H.264 High profile levels up to 5.0, UMV – ON, PRC – OFF,T8x8Inter – OFF and T8x8Intra – OFF, SM – ON, CABAC – ON, encoderPreset – XDM_HIGH_QUALITY, IntraPeriod-30, InputContentType-Progressive	H264_ENC_02
Version 2.0 Platinum mode	H.264 High profile levels up to 5.0, UMV – ON, PRC – OFF,T8x8Inter – OFF and T8x8Intra – OFF, SM – ON, CABAC – ON, encoderPreset – XDM_HIGH_QUALITY, IntraPeriod-30, InputContentType-Progressive With Different Feature Set (Refer Table 5)	H264_ENC_04
Version 1.1 backward compatible mode	H.264 High profile levels up to 5.0, UMV – ON, PRC – ON, T8x8Inter – OFF and T8x8Intra – ON, SM – ON, CABAC – ON, encoderPreset = XDM_USER_DEFINED, encQuality – 0, IntraPeriod-30, InputContentType-Progressive	H264_ENC_01
Version 1.1 backward compatible mode	H.264 High profile levels up to 5.0, UMV – OFF, PRC – ON, T8x8Inter – OFF and T8x8Intra – ON, SM – ON, CABAC – ON, encoderPreset = XDM_USER_DEFINED, encQuality – 0, IntraPeriod-30, InputContentType-Progressive With Different Feature Set (Refer 4)	H264_ENC_03
Version 2.0 Platinum mode	H.264 High profile levels up to 5.0, UMV – ON, PRC – OFF,T8x8Inter – OFF and T8x8Intra – OFF, SM – ON, CABAC – ON, encoderPreset – XDM_HIGH_QUALITY, IntraPeriod-30, InputContentType-InterlaceVideo	H264_ENC_05
Version 1.1 backward compatible mode	H.264 High profile levels up to 5.0, UMV – ON, PRC – ON, T8x8Inter – OFF and T8x8Intra – ON, SM – ON, CABAC – ON, encoderPreset = XDM_USER_DEFINED, encQuality – 0, IntraPeriod-30, InputContentType-InterlaceVideo	H264_ENC_06

#### Note:

- 1. Encode frame MHz depicts the cumulative the load on ARM926 and ARM968 separately.
- 2. Impact of SVC-T on performance number is negligible
- 3. They are measured in presence of linux without any system traffic . CE overhead is also excluded.
- 4. All numbers are collected (both average and peak) at frame-level processing for first 300 frames.
- 5. These performance numbers measured on DM36x platform with ARM @297 MHz, DDR @ 270, for other DM36x variants like ARM @432 MHz, DDR @ 340, these numbers will vary linearly based on DDR frequency ratio
- 6. The version of the code used to collect these numbers have the following features included:
  - i. Interrupt mode of operation one interrupt signal processing overhead per frame.
  - ii. Resetting of vIMCOP and loading of code into ARM968 DTCM once per Process call.

### **Memory Statistics**

	MEMORY STATISTICS in bytes						
COFIGURATION ID	PROGRAM		DATA MEMORY				
COFIGURATION ID	MEMORY	CONSTANT HEAP (Bytes)		STACK (Button)	TOTAL		
	(Bytes)	(Bytes) (Bytes)	PERSISTENT	SCRATCH	STACK (Bytes)		
H264_ENC_001 H264_ENC_002 H264_ENC_003 H264_ENC_004	494220	2372	14200392	73992	12288	14783264	

<sup>&</sup>lt;sup>1</sup>All these memory requirements are for ARM926 encoder library (including DMA library). They do not include any memory requirements from test application side. Stack, heap and code requirements for test-application are extra. Constant memory size requirements include code memory of ARM968 since it forms a constant table on ARM926 before transfer.

Table 11. **Internal Data Memory Split-up** 

	DATA MEMORY – VICP AND HDVICP					
CONFIGURATION ID	ARM968 ITCM (BYTES)	ARM968 DTCM (BYTES)	HDVICP BUFFERS (BYTES)	VICP (BYTES)		
H264_ENC_001 H264_ENC_002	49152	32768	ALL	65535(2048x2048))		

Below are the details of codec's usage of memory via CMEM. Height' and 'Width' used in equations are the parameter specified at the creation time. The memory requirement calculation is theoretical worst case for a particular resolution.

The constant size is the sum of .cinit, .bss, and .const sections used by H.264 encoder library.

Table 12. DM365 H264 Encoder usage of Memory via CMEM

BUFFER	YUV420P
Input Buffer	6291456 (for 2048x2048) (InputWidth * InputHeight * 1.5)
Output Buffer	3145728 (for 2048x2048) (worst case: InputBuffer/2)
MEMTAB	SIZE In Bytes
Memtab 0	1828
Memtab 1	5288
Memtab 2	5288
Memtab 3	20480
Memtab 4	2048
Memtab 5	13584384*
Memtab 6	896
Memtab 7	52616
Memtab 8	52616
Memtab 9	67200
Memtab 10	131072
Memtab 11	262144

Memtab 12	640
Memtab 13	49152
Memtab 14	38912
Memtab 15	10240

#### Notes:

- Memtab 5 size will be twice of those mentioned above for SVC-T
- When Adaptive Long Term frame feature is enabled Memtab5 size will become 20376576
- The above memtab sizes are measured for maxHeight = 2048 and maxWidth=2048.

Memtab 5 is calculated based on the resolution. Here is the formula

PAD\_VERT = 26 for encoderPreset = XDM\_USER\_DEFINED and encQuality - 0
PAD\_VERT = 48 for encoderPreset = XDM\_USER\_DEFINED and encQuality - 2 and 3
PAD\_HORIZ = 32 for encoderPreset = XDM\_USER\_DEFINED and encQuality - 0, 2 and 3

## Example:

For QCIF maxHeight = 144, maxWidth = 176 PAD\_VERT - 26 and PAD\_HORIZ – 32 uSize = (240\*196\*3) = 141120

#### notes

- HDVICP and MJCP
- The entire HDVICP is a video resource and is used by the codec
- The codec uses MJCP memory as scratch buffers and hence poses restriction on the usage of MJCP concurrently.
- DMA configuration

UMV Unrestricted Motion Vectors

VGA Video Graphics Array

vIMCOP Video and Imaging Co-processor

VUI Visual Usability Information

WVGA Wide Video Graphics Array (864x480)

XDM eXpressDSP Digital Media

#### **IMPORTANT NOTICE**

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, modifications, enhancements, improvements, and other changes to its products and services at any time and to discontinue any product or service without notice. Customers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All products are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its hardware products to the specifications applicable at the time of sale in accordance with TI's standard warranty. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by government requirements, testing of all parameters of each product is not necessarily performed.

TI assumes no liability for applications assistance or customer product design. Customers are responsible for their products and applications using TI components. To minimize the risks associated with customer products and applications, customers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any TI patent right, copyright, mask work right, or other TI intellectual property right relating to any combination, machine, or process in which TI products or services are used. Information published by TI regarding third-party products or services does not constitute a license from TI to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. Reproduction of this information with alteration is an unfair and deceptive business practice. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI products or services with statements different from or beyond the parameters stated by TI for that product or service voids all express and any implied warranties for the associated TI product or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

TI products are not authorized for use in safety-critical applications (such as life support) where a failure of the TI product would reasonably be expected to cause severe personal injury or death, unless officers of the parties have executed an agreement specifically governing such use. Buyers represent that they have all necessary expertise in the safety and regulatory ramifications of their applications, and acknowledge and agree that they are solely responsible for all legal, regulatory and safety-related requirements concerning their products and any use of TI products in such safety-critical applications, notwithstanding any applications-related information or support that may be provided by TI. Further, Buyers must fully indemnify TI and its representatives against any damages arising out of the use of TI products in such safety-critical applications.

TI products are neither designed nor intended for use in military/aerospace applications or environments unless the TI products are specifically designated by TI as military-grade or "enhanced plastic." Only products designated by TI as military-grade meet military specifications. Buyers acknowledge and agree that any such use of TI products which TI has not designated as military-grade is solely at the Buyer's risk, and that they are solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI products are neither designed nor intended for use in automotive applications or environments unless the specific TI products are designated by TI as compliant with ISO/TS 16949 requirements. Buyers acknowledge and agree that, if they use any non-designated products in automotive applications, TI will not be responsible for any failure to meet such requirements.
